"Gold Medal"

DAFFODILS

BARR'S DAFFODILS have been awarded upwards of 100 GOLD, SILVER-GILT, and SILVER MEDALS,

A Ten Guinea Silver Challenge Cup and Gold Medal 1901, Gold Medals 1902, 1903, 1904, and 1905, also many Certificates of Merit, etc.

View of a corner of Barr's Daffodil Nurseries in spring. (Copyright.)

BARR & SONS,

11, 12 & 13 King Street, Covent Garden,

LONDON.

NURSERIES:—Ditton Hill, Surbiton, Surrey (Surbiton Station, S.W.R.).

Visitors invited to see our Magnificent Collections of Daffodils, Tulips, etc., in Spring, and of Herbaceous Plants and Alpines, and many rare and beautiful Bulbous Plants, during Summer and Autumn.

Barr's "Gold Medal" Daffodils.

DAFFODILS are the most graceful and beautiful of all Hardy Spring Flowers, and withstand uninjured our severest winters better than any other flower. The cut blooms are always acceptable, and are in abundance out of doors at a season when other flowers are scarce. They supplement and associate admirably with hot-house flowers.

BARR'S DAFFODILS have been awarded the highest prizes during the Spring of 1905, including Gold, Silver-gilt, and Silver Medals for groups, and First-Class Certificates and Awards of Merit for individual varieties.

PRESS NOTICES OF BARR'S DAFFODILS.

Extract from "The Gardener's Chronicle," April 22nd, 1905.

"DAFFODIL SEASON "at Messrs. Barr's Surbiton Nurseries.

"The popular names of some of our oldest and most beautiful flowers are almost as beautiful as the flowers themselves, and are oft-times singularly appropriate. How better could the Narcissus be described than as Lent Lilies, for at this season the Daffodils are at their best—at any rate, they are at Messrs, Barr & Sons' nursery at Ditton Hill, which it was our pleasure to visit a few days since? A sight such as is afforded at 'Daffodil time' in these nurseries, where acres of these bulbous flowers are to be seen at a stretch, is one not readily forgotten.

This is not to be wondered at when it is remembered that the firm of Messrs. Bark & Sons is among Narcissus have afforded material to the hybridist and cultivator in plenty. Here at Ditton may be seen the very 'acme' of all that is best and novel among these popular flowers. The work of improvement still goes on, evidenced by the many fine seedlings yet unnamed brought to our notice, and by the order overheard given to the hybridist to take advantage of the morning to call inste

to the hybridist to take advantage of the morning to pollinate.

"As we enter the Narcissus fields—for such they can only be described—we pass through a rockery which is full of patches of colour. A drapery of Aubrietia hangs in a mass over a huge boulder; another stone is hidden tail of patenes of colour. A drapery of Audietta hangs in a mass over a mage bounder; another stone is indeen by tresses of Arabis albida; a patch of Muscari 'Heavenly Blue' forms a delightful groundwork to a bed of that rare find of Mr. Peter Barr, Narcissus Queen of Spain; Cydonias in many shades of colour are worked in here and there, while Magnolia stellata is still in full beauty. But we pass on past breadths of coloured Primroses and Cowslips to our object—the beds of Daffodils. To enumerate the whole of the varieties seen Primoses and Cowsips to our object—the beds of Dandellis. To entimerate the whole of the varieties seen would necessitate the compilation of nothing short of a bulky catalogue, so we must be content to notice a few only of the choicer and newer varieties. The variety 'Ariadne,' that was recently given an Award of Merit by the Royal Horticultural Society, is of most perfect form, with a perianth of the purest white, surrounding a corona of pale sulphur-yellow, with a crenated margin. Admiral Togo, as its name would suggest, is new, and resembles a big Emperor. Its rival, Admiral Makaroff, is also of the trumpet section, with a glorious yellow corona. Beatrice, one of the Leedsii section, is an almost pure white flower, with perianth of the best form. J. B. Camm deserves a word of notice; it is still one of the finest light-coloured trumpet Daffodils. Beauty is a large Incomparabilis, the corona being tipped with orange.

"A bed of 'Barrii comparabilis, in full beauty could not fail to attract attention, while pear by were such

"A bed of 'Barrii conspicuus' in full beauty could not fail to attract attention, while near by were such fine things as Duchess of Westminster, Weardale Perfection, and White Lady. Willie Barr has a lovely perianth of the softest shade of yellow and fimbriated margins; near by is Madame de Graaff, hardly surpassed as a white trumpet Daffodil for its size, colour, and symmetry of form. Vesuvius, Mars, and Lucifer, all of the Incomparabilis type, differ principally in the degrees of colour in the corona. Sunset may be noted for its umbel of fragrant flowers, each crowned with an orange-red cup; as well as Mercedes, a new Burbidgei, which hangs its twisted perianth and bright red cup in quite a modest manner. Varieties still appeal to us, but limited space compels us to but mention such fine new things as Rowena, Rev. D. R. Williamson, Salmonetta, Peter Barr, Peach (Leedsij), Mrs. George Barr, Lobster, King Alfred, Hon. Mrs. Joeelyn, Loveliness, etc. Among the Poet's Narcissus, one of the finest varieties is Glory, having large snowy white petals and an

exquisite 'eye.'
"The breadths apportioned to scedlings were well furnished, and many promising things were noticed.
"The breadths apportioned to scedlings were well furnished, and many promising things were noticed.

"The breadths apportioned to scedlings were well furnished, and many promising things were noticed. "The breadths apportioned to seedlings were well furnished, and many promising things were noticed. One labelled 115, a seedling bicolor, reminded us of a large J. M. B. Camm; another, 663, is a fine lemonyellow-coloured bicolor; its neighbour, 664, carried a fine yellow trumpet, and was the result of a cross between Madame Plemp and Lord Roberts; No. 68 resembles Weardale Perfection, but with a lighter trumpet and a white perianth; Pharaoh is a bold flower with sturdy trumpet of rich sulphur-yellow; No. 660 is a fine white Ajax with curved petals and creamy perianth. The giant trumpet of milky Way is of the palest yellow, while the flower is of excellent form; Mrs. Betteridge is new, with the trumpet almost white, spreading and crenated at the margin. Mrs. Henry Buckley, a new seedling of the Incomparabilis type, has a large, rich corona and a well-shaped flower; Blackwell, another Incomparabilis, although not new, is one of the best of this type, its beautiful chalice being stained with orange-scarlet; the flower stands well above the foliage. A bed of Cleopatra (trumpet) was in full beauty, while in contrast was the dwarf-growing yet sturdy Phil May, whose trumpet is of large proportions. The list is incomplete, but we must pass on, and as we do so, notice some of the other occupants of the nurseries, forExtract from "The Gardener's Chronicle," continued.

"The Tulips are not quite forward enough to be seen at their best, although several beds of 'English Tulips are now in flower; while a collection of 'the flaunting red' Due van Thol was most conspicuous, although perhaps somewhat past their prime. Museari 'Heavenly Blue' was observable from almost any position in the nursery, broad patches of it having been planted in various parts of the grounds.

"We also noticed some fine forms of coloured Prinroses, Irises, Polyanthus, Myosotis, Ornithogalum,

Extract from "The Daily Chronicle," April 6th, 1905.

"DAFFODILS' ROMANCE.

"Rare Bulbs that Cost Fifty Guineas each.

"Hearts that have the Wordsworthian faculty of dancing with the daffodils would be in their element these days at Ditton Hill, Surbiton, the famous haunt sometimes ealled 'Barr's Paradise.' The beautiful new daffodils are now in bloom, and Surrey shows nothing more fascinating. It is a floral fairy-land.

"A 'Daily Chroniele' visitor who studied its radiance and daintiness yesterday was obliged to admit that the poets, despite all their enthusiasm for daffodils, have really done them but scant justice, conveyed no sense of the exquisite grades and charms of colour.

"But then the poets have not had the advantage of studying the wonderful varieties produced with infinite patience by the house of Barr, which to every connoisseur must always be associated with the romance of the

development of the daffodil.

- "Messrs. Barr, who are artists and poets in their sphere, are justly proud of their newer varieties: the magnificent **Duke of Bedford**, measuring four and a half inches across, with perianth pure white, clear soft yellow trumpet, and standing twenty-two inches high, the **Salmonetta**, with its prettily fluted cup of beautiful apricot shade, the **Weardale Perfection**, one of the grandest of all trumpet daffodils, and many more. The **Admiral Togo** and the **Phil May** are amongst the very new varieties. The Admiral is a strong grower and free bloomer.
- "But, as Messrs. Barr point out, there are a number of varieties which, though known for some time to connoisseurs, are quite new or unknown to the great public. Arladne, King Alfred, and many others might be instanced—even the Peter Barr, the King of white trumpet daffodits, selling at fifty guineas a bulb, is only famous after all within a comparatively small circle.
- "Of the marrying and giving in marriage of daffodils down Surbiton way, of the training of the young idea in the daffodil order, and all the experiments and colour triumphs, the Barr family have quite romantic records.
- "Many years ago, when Mr. Peter Barr began his work, florists mocked him. Who, they asked, could
- make anything of wild and ordinary things like daffodils? It was soon Mr. Barr's turn to laugh.

 "His daffodil quests in Spain, Portugal, and other distant spheres would alone make a delightful story.

 The tiniest of all daffodils he found in Spain eighteen years ago.
- "Messrs, Barr generously invite visitors to look in and see their floral wonderland (which is not far from Surbiton Station on the South-Western Railway). It is a kingdom of beauty whose annals and potentates are inexhaustible in their interest. Messrs, Barr believe that to advance the culture and the fame of flowers is to widen the gracious ways of civilisation."

Extract from "The Morning Post," April 10th, 1905. "DAFFODILS AT SURBITON.

"There is no more beautiful scene at this time of the year than a bulb farm in Holland, but it is not necessary to spend a weck-end at Haarlem or Leyden for the purpose of enjoying the beauties of spring-time. Within easy reach of the metropolis, Messrs. Barr's nurseries, between Surbiton and Thames Ditton, are just now ablaze with all the colours of the rainbow. Hyacinths and Tulips of every hue, Museari of the deepest ultramarine, Primroses, and Anemones in varying tints, contrast with broad stretches of Nareissi in white and gold. Taking advantage of the sunshine, a number of flower-lovers visited the grounds on Saturday, and were shown round by Mr. William Barr. At present and for a week to come the daffodil section of the narcissi family will be seen at its best, to be followed by the poeticus or "pheasant-eye" variety. But there are many intermediate kinds, the result of hybridisation, each with its particular merit or distinction in form or eolour. The most striking varieties just now are the trumpet Daffodils, with huge vase-like centres varying from deepest golden-yellow to purest white. In the bicolor section the yellow trumpet standing out from a eircle of white petals (ealled the perianth), of which 'Duke of Bedford' is one of the finest examples, forms a most attractive feature. 'Madame de Graaff' is distinguished by trumpet and perianth being both white; but the best white that has yet been raised is 'Peter Barr,' which created a sensation three years ago when it received the first-elass certificate of the Royal Horticultural Society, and which is still rare enough to be priced at fifty guineas a bulb. One of the great charms of a visit to these gardens is the opportunity for comparison of the various sections, and of the study of the development of the large refined flowers of the present day from the insignificant Lent lily of our fields and hedgerows or the narcissus of the poets.

Short Extract from "The Saturday Review," April 29th, 1905. "VIGNETTES OF DAFFODILS.

"The season of daffodils and narcissi is still with us-indeed, is but little on the decline. More than once in the pages of the Saturday Review, as spring returned, have we asked our readers to come out with us and wander amongst these adorable flowers in the long stretches of them that lie at Ditton Hill by Surbition, Even were they the same flowers year following year, who could ever weary of them? But each season the patient and skilled gardener brings us new varieties to wonder on-yes, and these new varieties are each time many. Here are half a dozen such gathered almost at random. But for the moment let them suffice. . . ." (Here follows a description of the daffodils most admired by the writer-King Alfred, Cleopatra, Loveliness, Cassandra, Agnes Harvey, and Elvira.)

CULTURE AND ADAPTATION OF THE DAFFODIL OUTDOORS.

Soil and its Treatment.—The Daffodil will thrive in any ordinary garden soil, but prefers a deep, rather moist loam. When the soil is of a dry and sandy nature, it should be deeply dug, if possible at least a season before planting the bulbs, well-decayed stable manure being added, and a potato or other vegetable or annual erop grown on the ground. Before the bulbs are planted a sprinkling of quick-lime should be spread on the surface and then dug in. If it is not convenient to first take off a crop of Vegetables or Annuals, then, in digging, give a dressing of lime to the top spit, and work in a little well-decayed stable manure one foot below the surface, so as to be out of the reach of the bulbs; the manure is used not as a stimulant but as a sponge to hold moisture in the soil. The ammoniacal properties of manure are injurious to the Daffodil, hence great eare is necessary in the use of it. On good retentive loamy soils stable manure is not required, but a dressing of lime may prove beneficial.

Freshly dug Soil should be allowed to stand vacant two to three weeks before planting, to allow the ground to settle down, otherwise the freshly planted bulbs are sometimes drawn under considerably below their proper depth, and the bloom in consequence is apt to be weakened and retarded the first season.

Best and Safest Manure to use is Crushed Bones or Basic Slag (for price see page 38). This should be applied at planting time, and may be mixed with the soil or placed next the bulbs; the Crushed Bones may be applied at the rate of 4 ewt. to the acre, or $1\frac{1}{2}$ oz. to the square yard, and Basic Slag may be applied in same manner at the rate of 1 ton to the acre, or $7\frac{1}{2}$ oz. to the square yard. We recommend for light soils Crushed Bones (provided they are genuine) in preference to Basic Slag. On very poor and DRY SANDY SOILS we recommend in addition SULPHATE OF POTASII (for price see page 38), to be sprinkled annually in the autumn over the surface of the ground, after planting, at the rate of 2 cwt. to the acre, or about $\frac{3}{4}$ oz. to the square yard. The potash not only increases the depth of colour in the flowers, but also helps to hold moisture in the soil, a condition so essential to the perfect development of the Daffodil. We also recommend the use of Phytobroma in autumn and spring (see particulars, page 38).

In Early Spring, as soon as the Daffodils begin to show above ground, the surface soil should be well broken with a hoe, to sweeten it after the heavy winter rains. Where practicable it is advisable to cover the ground in November with some light covering material (the idea is to prevent the autumn rains from beating down the crust of the ground, and to break the severity of a sudden frost). We use for this purpose pulled heather; cut furze or gorse, however, answers the same purpose; cut fern or bracken is bad, as it lies too wet; old pea sticks laid across the ground are good, or on flower beds sprays or small branches of cut evergreens stuck into the ground answer the purpose and look decorative; these, of course, need renewing when they get shabby. Do not mulch the beds with manure.

Planting and Lifting.—The best time to plant, to obtain the finest flowers, is during September, although bulbs may be planted as late as Christmas with fairly satisfactory results. (We have planted some Dallodils as late as the second week in February, and had some very good blooms the third week in May.) We recommend, however, early planting. The bulbs may be left undisturbed for years in ordinary good loamy soils, but on poor and light soils they are better lifted every two years, as soon as the foliage has died down, and replanted as early as is convenient. Never plant when the ground is wet and sticky; wait until it is dry and friable. Do not put silver sand around the bulbs of Nareissi except in the ease of N. corbularia.

Depth to Plant.—The average depth to plant is from 2 to 3 inches, that is to say, a covering of 2 to 3 inches of soil, but not more. As the bulbs vary considerably in size, according to the relative varieties, the best rule to go by is the bulb itself, which should be covered with soil once and a half its own depth, measuring the bulb from the collar of its neck to its actual base. On light sandy soils the bulbs may be planted a trifle deeper than on heavy stiff soils, and in the North of England and in cold localities they should be put in a little deeper than in the warmer southern districts.

Position and Grouping for Effect.—All Daffodils prefer partial shade, although most of them will grow equally well in the open. The varieties which are best grown in partial shade are indicated in the following pages by an *. In the flower border, to obtain the best effect, Daffodils should be planted in large groups of irregular outline, each group or clump to contain one variety only; avoid straight lines, circles, and symmetrical designs. Masses of Daffodils should always appear in the Hardy Flower border, where irregular and effective sweeps can be planted between the clumps of herbaecous plants which in their turn grow up and hide as well as shelter the Daffodil foliage while it is going to rest. In grouping Daffodils the season of flowering should be borne in mind, as the varieties bloom in succession from the end of February to the end of May, during which period, by a judicious arrangement, a constant succession of flower is obtainable. On page 17 we denote the rotation of blooming.

Naturalising Daffodils in Grass, Etc.—All Daffodils may be planted in grass with perfect success. To produce the best effect, the three groups should be kept separate: thus the Star Narcissi should not be mixed with the Great Trumpets, nor Poet's Narcissi with the Star Narcissi. In arranging, make the breaks large and bold, scattering the bulbs over the ground broadcast with the hand, and planting them where they fall. Avoid symmetrical lines or formal circles as far as possible, as these are never found in nature. In planting under trees, avoid places where the drip from the branches is greatest, also where the main roots of the trees come close to the surface.

Varieties specially Suitable for Naturalising in Woodlands, Grasslands, Glades, Etc., Delighting in Partial Shade.—These are mostly free seeders, and will therefore spread naturally; they are mostly wild plants—Abscissus, Countess of Annesley, Golden Spur, Henry Irving, Obvallaris, Spurius, Cabeceiras, English Lent Lily, Princeps, Scoticus, Albicans, Pallidus Præcox, Moschatus of Haworth (very pretty in grass), Johnstoni Queen of Spain (in our opinion the most beautiful of all for this purpose), and all varieties of Poëticus. The Varieties underlined we do not recommend for the cultivated border, as they deteriorate the second year, while in woodlands, grass, or meadowland they flourish.

NATURALISING DAFFODILS IN GRASS, ETC ,-continued.

Varieties specially Suitable for Naturalising in Grasslands, Parks, on Lawns, Meadows, Etc.—The following are all very free bloomers, good strong growers, as well as distinctive effective varieties, showing up well from a distance; the flowers are beautiful and valuable for cutting: Emperor, Empress, P. R. Barr, Queen of Spain, W. P. Milner, Horsfieldii, Mrs. Thompson; all handsome trumpet varieties; the following are the best of the chalice-cupped: Incomp. Beauty, Frank Miles, Stella superba, Sir Watkin, Leedsii, M. M. de Graaff, Duchess of Brabant, Minnie Hume, Mrs. Langtry and Palmerston, Parrii conspicuos. Flora Wilson, Crown Prince and Siddington, Odorus and Organisms of the Page Barrii conspicuus, Flora Wilson, Crown Prince and Siddington, Odorus and O. rugulosus; of the Poets or Dolly-cupped the following are the best: Ellen Barr, Falstaff, John Bain, the early Pheasant's Eye (Poeticus ornatus), and the late Pheasant's Eye (Poeticus of gardens); and of the double flowered daffodils: The Old Double Yellow (Telamonius plenus), Butter and Eggs, Eggs and Bacon, and Codlins and Cream.

For Lawns and Tennis Courts which have to be mown early we recommend the dainty Minimus and Cyclamineus, which make a charming picture. Being very early varieties the grass may be safely

mown in May.

Yarieties Suitable for Planting by the Water Side.—Daffodils produce a charming effect when growing at the water's edge. The following varieties we can strongly recommend for this purpose—Odorus and Odorus rugulosus, with their rush-like foliage and graceful golden flowers; Duchess of Westminster, John Bain, and the old late Pheasant's Eye Narcissus (Poëticus), with their graceful starry flowers; Emperor, P. R. Barr, and Empress, three noble trumpeters; Sir Watkin, Barrii conspicuus, Stella superba, Beauty, Frank Miles, and the Double White Poeticus or Gardenia-flowered Narcissus, etc. In choice spots near the water's edge the charming little Cyclamineus should be planted, as also the sulphur-coloured Hoop Petticoat Narcissus (N. Bulbocodium citrinum), both of which luxuriate in moist grassland. grassland.

Method of Planting Daffodils in Grass.—We recommend for this work our SPECIAL BULB PLANTER (see illustration, page 39). By the use of this implement the trouble of planting bulbs in grass is reduced to a minimum. It takes out a clean, circular piece of turf 2 inches in diameter, and of sufficient depth. On making the second hole this piece of turf is released from the planter and lies ready on the ground to cover the bulb with. The soil is not in any way tightly pressed and made hard, which is the case when an ordinary dibber is used, and the appearance of the grass is not spoilt; in fact, after planting 10,000 bulbs with this tool on a greensward, one could not detect that the grass had been touched If the ground is very poor and thin, a compost of fresh soil with an abundance of Cruched Rouse (7) the If the ground is very poor and thin, a compost of fresh soil with an abundance of Crushed Bones (7 lbs. to a bushel) should be made and dropped into each hole before placing in the bulb, a little more should be given as a covering, and then the sod of turf be replaced and pressed down. The bulbs will then be given a fair start in their new quarters. (For price of Barr's Special Bulb Planter, see page 39.)

The Best Time for Planting in Grass is with the advent of the autumn rains, when the ground is in a fairly moist condition, it being impossible to plant whilst the ground is hard and solid from the summer heat; moreover, nothing is gained by planting in hot dry ground, to say nothing of the cost and labour of planting.

CULTURE OF DAFFODILS IN POTS OR BOXES.

Time of Potting.—Pot as carly in autumn as possible to obtain the finest results and earliest blooms. The best compost to pot Daffodils in is a mixture of two-thirds good fibrous loam (which should be pulled to picces by the hand and not passed through a sieve, so as to retain in the soil as much old root fibre as possible), and one-third old decayed leaf soil, with a sprinkling of sharp silver sand, adding 1\frac{1}{3} lbs. of bone meal or Phytobroma (see page 38) to every bushel of soil, which mix well together before using. Never pot in soil that is wet or sticky. Barr's Fertilised Fibre and Charcoal may also be used; it is light and cleanly to handle, and is a suitable medium for growing all kinds of spring dovering hulbs in pots or wasse either for indoor decoration or for cutting. of spring-flowering bulbs in pots or vases, either for indoor decoration or for cutting. (See page 38.)

The Pots should be carefully washed or wiped clean before using. Never pot in dirty or wet pots.

Good drainage should be secured by placing three or more pieces of broken crocks over the hole, placing the crocks with bevelled sides uppermost, then cover crocks with a little rough fibre from the loam. When boxes are used, the slit at bottom of box should be covered with crocks, a good layer of rough fibrous loam placed at bottom of box, or a layer of leaf soil to ensure perfect drainage.

In potting, the larger bulbs should be two-thirds covered with soil and the pots filled to within half an inch of the rim to allow of watering when in growth. The small bulbs of the miniature species

should be covered with half an inch of soil.

After potting, stand the pots or boxes outside in the open, under a north wall by preference, on a firm bottom such as a bed of ashes or gravel path to prevent the entrance of worms. The pots should be plunged bodily in Cocoa Fibre, ashes, or old decayed leaf soil, filling in the covering material in between the pots, which should be completely buried to a depth of 4 inches. This will secure a natural and moist condition to the bulbs and encourage root action. So long as the pots are plunged in the open they will require no watering.

The pots or boxes should remain plunged for a period of not less than twelve weeks, after which portions may be removed indoors in succession, selecting first those which bloom naturally early. Place first in a cold frame, cool greenhouse, or cold sitting room free from draughts, close to the glass. Very weak liquid manure water may then be given once a week until they come into bloom. Those that are wanted in bloom early may, after the flower buds are advanced, be placed in a warmer temperature, such as a slow forcing-house, but this should never exceed 65° if really fine blooms are desired. The plants should always be kept as near to the glass as possible and not allowed to get drawn, from an insufficient supply of light or air. On no account should bottom heat be given in forcing Daffoduls.

Of the stronger growing sorts use three to six bulbs, according to size of bulb, for a pot measuring $4\frac{1}{2}$ to 6 inches in diameter; of the small miniature kinds, such as N. Minimus, Nanus, Minor, Cyclamineus, Triandrus,

CULTURE OF DAFFODILS IN POTS OR BOXES-continued.

Juncifolius, and Corbularias, use twelve to eighteen bulbs for a $4\frac{1}{2}$ to 6-inch pot. These small-flowered dwarf-growing species are most charming in pots or little shallow pans. The following may easily be had in bloom in January:—N. Minimus, Minor, Nanus, and Cyclamineus, and these may he mingled with Chionodoxas, as both bloom at the same period and produce a charming contrast. The White Hoop Petticoat Narcissus should be potted in almost pure sand kept well moist, and if placed at once in a cold frame after potting may be had in bloom by Christmas. (See Rock Garden Collections of Miniature Daffodils, page 8.)

If Daffodils are wanted in quantity for cutting early in the season, plant thickly in boxes, giving same culture as recommended above for growing in pots. Of the best varieties to grow for early forcing in boxes, the following command a first place: First early sorts—Queen of Spain, Henry Irving, Golden Spur, Sir Watkin, Old Double Yellow Daffodil; Second early sorts—Emperor, Empress, Horsfieldii, P. R. Barr, Barrii conspicuus, Incomparabilis Beauty, and Stella superba. All the miniature Daffodils make charming pot plants, especially the following: N. Minimus, N. Cyclamineus, N. Triandrus albus (Angel's Tears), and N. Juncifolius.

63 All Daffodils may be grown in pots, but in the following pages we have indicated thus † those kinds which are best for this purpose.

CULTURE OF DAFFODILS IN VASES AND BOWLS.

A charming effect can be obtained by growing Daffodils in fancy vases or bowls, with or without drainage, by simply using our specially prepared Fertilised Fibre and Charcoal Mixture (3s. 6d. per bushel, 1s. per peck); the mixture is light, clean, and nice to handle, and remains sweet (an important matter where the vases used have no drainage holes); indeed, it is in every way superior to potting soil for growing Daffodils and other bulbs in fancy bowls and vases.

Three bulbs of N. Queen of Spain growing in Barr's Fertilised Fibre in a 4-inch "Doultonware" Vase, without drainage hole.

Culture.—Fill the vase or bowl with the Fibre and Charcoal Mixture, and plant the bulbs in the same manner as with ordinary potting soil; the larger bulbs should be about half covered, the small miniature growing varieties only just covered. When potting, fill the vase with the mixture up to a little below the rim, so as to allow sufficient space for watering. Pot firmly. After potting, give sufficient water to make the whole moderately damp. The vases may be then either placed in a cold frame and plunged in cocoa fibre, where they may remain twelve weeks, or they may be placed in a dark cupboard or cool airy cellar until they have made 4 to 6 inches of top growth, when place in the window of a cool airy sittingroom or in a cool greenhouse close to the glass, where they may be flowered in the same way as pot Hyacinths, except that they should always be kept as near to the glass as possible, and given sufficient light and air to prevent the foliage from becoming drawn. When the flower buds are advanced, they may be removed to a warmer temperature, such as a slow forcing-house or warmer sitting-room, still being given as much light as possible. No bottom heat must ever be given, neither should they be placed in too warm a temperature until the flower buds are well developed. Once they have started to make good growth, the mixture should be kept moist, but water must be given sparingly until the bulbs have made at least 6 inches of top growth.

SPECIAL FANCY VASES AND BOWLS for growing Daffodils, etc., in.

We have had special little fancy vases made for us by Messrs. Doulton for growing Daffodils and other spring bulbs

in our Fertilised Fibre and Charcoal Mixture. The vases are of elegant shape, of a neutral art drab shade, and without drainage holes, thus saving the use of saucers. They will be found most useful for growing not only Daffodils in, but also Tulips, Hyacinths, Snowdrops, and Chionodoxas, also the charming winter-flowering Irises—reticulata, etc., either for table decoration or the greenhouse. During summer they may be used for table decoration planted with Pansies and such low-growing hardy flowers, or for standing little pot-plants in. All Daffodils that may be grown in pots may also be grown in these fancy bowls, and in the following pages we have indicated thus † those kinds that are best for this purpose.

BARR'S "Doulton=Ware" BULB VASES (as illustrated): $-2\frac{1}{2}$ in. diameter, -/9; 4 in. dia., $\frac{1}{3}$; $5\frac{1}{2}$ in. dia., $\frac{2}{7}$; 7 in. dia., $\frac{3}{7}$ each.

FANCY DECORATED JAPANESE BOWLS:—5 in. diameter, -/10; 6 in. dia., 1/3; 7 in. dia., 1/9; 8\frac{1}{4} in. dia., 3/-; 9\frac{1}{2} in. dia., 4/-; 10\frac{2}{4} in. dia., 6/-; 12 in. dia., 8/6 each.

Barr's Fertilised Fibre and Charcoal Mixture, for growing bulbs in Vases, Bowls, Jardinets. etc., 3s. 6d. per bushel; 1s. per peck (bags free).

ON CUTTING DAFFODILS FOR DECORATION.

To obtain very fine blooms Daffodils should be cut in a young state, just when the bud is bursting. Place in water and allow the flowers to expand in a cool greenhouse or sitting room. The blooms opened in this way are larger and purer in texture and of better colour than those which develop out of doors.

Miniature Daffodils for the "Rock Garden."

The following are charming little subjects for rockwork, where their dainty flowers are seen to perfection. They should be left undisturbed for years, and, if happy, will soon establish themselves and afford a lovely picture in early spring. All the Corbularias (except Corbularia monophylla) like moisture, and should therefore be planted at the foot of the rockery. Cyclamineus also likes moisture and partial shade. Corbularia monophylla flourishes in a warm dry sheltered situation, and should be given a hot sunny nook, planted in almost pure sand; when coming into bloom give water freely. Triandrus albus (Angel's Tears) and Juncifolius delight in partial shade and a light gritty soil, and should be given a well-drained position such as a sloping bank. In the case of these slender dwarf-growing Miniature Daffodils, the ground may be carpeted with close-growing surface rooting plants, such as Arenaria caspitosa, Thymus serpyllum vars., T. lanuginosus, Herniaria glabra, Mossy Saxifragas, etc.; these plants provide a natural protection for these little bulbs, besides keeping their dainty blooms from being splashed and soiled in rainy weather. We prefer, however, seeing these little gems peeping out of grass, and where special banks are made or reserved for them we can supply seed of suitable fine dwarf grasses for sowing in September after planting the bulbs; this sowing will give a fine green carpet by the following spring when the Narcissi bloom.

Full descriptions of the following Miniature Daffodils will be found in body of Catalogue.

NARCISSUS PETER BARR, The King of White Trumpet Daffodils.

Raised at our Ditton Hill Nurseries, and acknowledged to be the finest White Trumpet Daffodil in existence. The flower is large and bold; of beautiful symmetry and fine substance, with pure white campamulate perianth and large handsome white trumpet of elegant outline. It is a strong grower and free bloomer, with handsome deep bluish green foliage.

First-Class Certificate R.H.S., 1902 Awards of Merit by the Royal Botanic Society, London, 1904, and the Devon Daffodil Society, 1904. (See page 11.)

Reproduced from a Photograph. (Copyright.)

NARCISSUS ARIADNE.

A flower of refined beauty, and the admiration of all who have seen it. The perianth is white and the saucer-shaped cup, which is an ivory white, is very wide and spreading, prettyl frilled at margin, a very striking flower lasting long in bloom, ht. 15 in. Awards of Merit by the Midland Daffodil Society, 1902; Cornwall Daffodil Society, April 8th, 1904; Plymouth, April 12th, 1904; and the Royal Horticultural Society, March 28th, 1905. (See page 11.)

Barr's New Seedling Daffodils FOR 1905,

Including several which are offered for the first time.

The following list of Daffodils includes the best of the new seedlings recently raised by ourselves and others, and purchasers cannot fail to be pleased with them. In point of quality they all rank high, while a robust healthy constitution renders them additionally valuable. They will well repay a good culture by the size and beauty of their flowers.

Where we have a record, we give in inches the heights as registered at our Ditton Hill Nurseries. The relative qualities as we judge them we have indicated by xx, xxx, xxxx, the highest quality flower being given the most marks.

PETER BARR,

THE KING OF WHITE TRUMPET DAFFODILS, XXXXX.

Awarded First-Class Certificate by the Royal Horticultural Society, April 8th, 1902. First-Class Certificate, Cornwall Daffodil Society, March 31st, 1903. Awards of Merit by the Devon Daffodil Society, April 12th, 1904, and the Royal Botanic Society of London, April 13th, 1904.

This is without doubt the King of White Trumpet Daffodils. The flower is large and bold, of beautiful symmetry and fine substance, with pure white campanulate perianth and large handsome white trumpet of elegant outline. It is a strong grower and free bloomer, with handsome deep bluish green foliage. Narcissus **Peter Barr** was raised at our Ditton Hill Nurseries, and was offered for the first time in 1903. **£42** each. See Illustration, page 9.

Extract from "Gardener's Chronicle," May 3rd, 1902.

"Peter Barr is not the only white Ajax or large trumpet variety that has been raised, but it is certainly the best and much the best. . . In colour the flower is described as white, but it must be understood that by this is not meant the pure white which is seen in Narcissus Poeticus. No trumpet Daffodil is yet so pure, but Peter Barr is the very palest sulphur-white, the perianth being a shade purer than the trumpet, and the whole whiter than any existing Ajax variety. It is said to have been raised from Monarch and Madame De Graaff, and will be a fitting memorial of a man whose life has been spent in developing and popularising the Daffodil. It blooms a day or two later than mid-season."

and populations are purchased as a second and a second area.		each.

NARCISSUS HENRI VILMORIN.

A most beautiful white Trumpet Daffodil of very refined texture and form, flowers measuring $4\frac{1}{2}$ inches across and rather of *Empress* shape. Award of Merit Royal Horticultural Society, April 19th, 1904. (See page 12.)

Reproduced from a Photograph. (Copyright.)

NARCISSUS HULDA.

A remarkably handsome Trumpet Daffodil measuring 4 inches across, of great substance, having a large broad white perianth and large soft primrose trumpet, ht. 18 in. (See page 13.)

General List of Barr's Daffodils.

For Alphabetical List of all the Varieties offered in this Catalogue, see General Index, page 2 of Cover.

The following list of Daffodils embraces the highest class, and most distinct varieties, surpassing in beauty and diversity all other assortments offered to the public. They represent the cream of our Collection (over 500 kinds), and the best of the newest varieties in commerce up to 1905, several being offered to the public for the first time this season. During the past few years we have discarded many of the older kinds which we considered had been superseded by better sorts, those which are now offered by us being really good and distinct. Those kinds which are marked in this Catalogue "discarded," can be supplied if required.

TIME OF FLOWERING, HEIGHT, Etc.

The relative period of flowering of the different varieties and species out of doors we have denoted by means of numbers after the names, thus:

(1) 1st early, flowering from February to early March.

(2) 2nd early, tlowering in March.
(3) Varieties flowering in mid-season, or early in April. (4) Late-flowering varieties, from middle to end of April.

(5) Very late-flowering varieties, opening in May.

The actual period of blooming depends upon the scason and district; thus in early districts (1) would commence in January and early February, while in colder districts end of February or beginning of March; but the natural rotation would remain the same.

HEIGHT.-In most cases we give also the heights in inches as recorded at our nurseries.

QUALITY OF FLOWER. - Each season we go carefully over our Daffodil collection with a view to recording the quality of each variety. This we indicate by x, xx, xxx, xxxx, and xxxxx, giving the most marks to those we judge to be the finest. The result we have added to this catalogue, trusting it may be found a useful record to amateurs. Varieties which we consider to be superseded by better sorts, or which we have found to have a poor constitution, we have discarded.

* The varieties marked thus * thrive best under the shade of deciduous trees, naturalised in grass in shady nooks, or on grassy slopes facing north.

† indicates those kinds which should be selected where Daffodils are grown in pots; they are, however, also good border varieties.

§ indicates those Daffodils which, besides being fine border plants, make a pretty effect when naturalised in grass; they are all strong growers and free bloomers.

Group I.—Magni-Coronati.

LARGE CROWNED OR TRUMPET DAF= FODILS, including the species Cyclamineus and Hoop Petticoat Daffodils (Bulbocodium or Corbularia), also the hybrids Johnstoni, Backhousei, Tridymus, and Humei.

DISTINGUISHING CHARACTER. - Tube of flower as broad as it is long (except in the case of Johnstoni, page 23, and Cyclamineus, page 24), and the crown or trumpet more than three-quarters as long or longer than the perianth segments (petals).

TRUMPET DAFFODILS.

Varieties with Yellow or Primrose-coloured Trumpet and perianth of same shade or lighter (not white).

*ABSCISSUS (4), x, a native of the French per doz. each. Pyrenees, perianth sulphur-yellow, long rich yellow trumpet, the latest flowering of all Trumpet Daffodils, and valuable to naturalise in quantity in grass, woodlands, etc., ht. 12 in. per 1000, 45/-; per 100, 5/- 0 9... --

TRUMPET DAFFODILS.

Silvery White and Pale Primrose-Coloured Varieties.

Silvery write and rale rrimrose-coloured varieties.			
Most of the Daffodils in this section thrive best in fibrous virgin loam, mixed with leaf-soil; generally speaking they dislike manure; where, however, the soil is very poor, basic slag may be used (for full directions, see page 3). The varieties marked thus * thriz shade of deciduous trees, naturalised in shady grassy nooks, or on grassy slopes facing north.	bone	e-meal <i>st in t</i>	or the

NARCISSUS JOHNSTONI.

Natural Hybrid of Ajax x Triandrus, with reflexing perianth, and tube longer than it is wide.

The same of the sa

NARCISSUS JOHNSTONI QUEEN OF SPAIN (About two-thirds natural size).

\$\forall *QUEEN OF SPAIN (2), xxxx, found by Mr. Peter Barr in Spain. One of the most beautiful, distinct, and graceful Daffodils in cultivation, and unsurpassed either for bedding, pot or vasc culture, or for naturalising in woodlands, etc. The flowers vary slightly in size, but all are of a uniform soft, delicate, clear yellow, with a gracefully reflexing perianth, trumpet of distinct and elegant form, ht. 12 in. Naturalised in grass under trees, this Daffodil forms a delightful feature in the garden. It also adapts itself readily to bowl culture in cocoanut fibre and charcoal, or damp pebbles and gravel, and grown thus affords an artistic decoration for the sitting-room. Awarded Floral Certifieate at the Daffodil Conference, 1896. As we have to depend upon collected bulbs for our annual supply, and these have to be taken up while the folioge is still green, all the bulbs may not bloom the first season, but a good proportion will.

Chalice-Cupped Daffodils or Star Narcissi, Etc.

MADOISSILS TRIDVMILS

EXAMPLE OF A FLOWER IN GROUP II.

(QUELTIA, PHILOGYNE, GANYMEDES, ETC., OF SALISBURY, HAWORTH, AND HERBERT; PEERLESS, NONSUCH, ETC., OF PARKINSON.)

The varieties of this group are hybrids, excepting Triandrus and Juncifolius, which are species. Incomparabilis and Barrii are the result of garden crosses between yellow Trumpet Daffodils and Narcissus Poëticus; Leedsii, a garden cross between White Trumpet Daffodils and Poëticus; Nelsoni, the result of a Trumpet Bicolor var. crossed with Poëticus; Bernardi, a natural cross between Abscissus and Variiformis (Trumpet Daffodils) and Poëticus; Macleaii, an ancient hybrid, origin unknown, but it may be a cross between a Trumpet Bicolor and a Tazetta or Polyanthus Narcissus; Odorus, an ancient hybrid between a Trumpet Daffodil and Narcissus Jonquilla.

The varieties in this group commence flowering in March, and furnish a succession till May. They are all of elegant beauty, and as cut flowers are extensively used for furnishing vases and table bouquets. For this purpose they should be grown in quantity in boxes and forced for early bloom (see page 4).

The varieties marked thus * are not suitable for all cultivated borders, but thrive best under the shade of deciduous trees such as fruit trees, etc., or naturalised in grass in shady nooks, or on grassy slopes facing north or north-west.

NARCISSUS INCOMPARABILIS.

DISTINGUISHING CHARACTER.—Depth of crown or cup more than one-third and up to three-quarters the length of the perianth segments (petals).

All these make charming pot-plants, while the cut flowers are of great value in deed beds and borders they are very showy, and naturalised in grass few flowers are so graceful and is well to bear in mind that the depth of colouring in the cup varies according to season.	effec	ctive. oz. ea	It ch.

NARCISSUS LEEDSII.

The Silver-White Fragrant Star, or Eucharis-flowered Narcissi.

Comprising the white and sulphur-cupped Incomparabilis and Barrii forms, all with pure white perianth segments (petals).

These chaste and beautiful Daffodils are highly prized for indoor decoration, while to cut for bouquets their fragrant flowers are greatly in demand. Plant 3 or 5 bulbs in a 5-inch pot. In flower beds and borders, they are most charming, while naturalised in grass they resemble a multitude of silvery per doz. each. white stars. \$LEEDSH (2), silvery white, starry, sweet-scented, ht. 15 in. per 1000, 27/6; per 100, 3/- 0 5... — †Agnes Harvey. NARCISSUS TRIANDRUS (syn. Ganymedes).

The White Cyclamen-flowered Daffodil, with reflexing perianth.

THE DAINTY LITTLE "ANGEL'S TEARS" DAFFODIL (Triandrus albus) was found by our Mr. Peter Barr on the monntains of Portugal and Spain, growing in very hard, firm, fine gritty soil, sometimes in the narrowest fissures of granite and slatestone rocks. All in this section make lovely little pot plants, and grown thus should be given cold frame culture. Established on rockwork out of doors they form a picture full of grace and beauty. They prefer shade, a gritty soil, and well-drained position. per doz. each.

ALBUS (3), xxxx, an exquisitely beautiful little flower, s. d. s. d appropriately called the "Angel's Tears" Daffodil, the flowers are creamy white and are variable in size, perianth elegantly reflexed, ht. 7 in. As we have to depend upon collected bulbs for our annual supply, and these have to be taken up while the foliage is still green, a proportion may not bloom the first season. The bulbs should therefore be left undisturbed to establish themselvesper 100, 8/6 1

,, 10/6 I 6...**0** 2 Larger-size bulbs †CALATHINUS (3), xxxxx. One of the most beautiful little Daffodils in existence. The flowers, which are snowy white, are more than twice the size of Triandrus albus, with long goblet-shaped crown prettily fluted, and arc borne two to three on a stem; the foliage has a curious twisting habit, ht. 7 in. For pot culture and rockwork it is a perfect gem. Mr. Peter Barr collected this rare Daffodil some years ago in the Isles of Glénan, the collecting being attended with a good

deal of risk. The bulbs we offer bloom very freely ... 17 6...1 8 Extra large bulbs 25 0...2 3 22 †CONCOLOR (3), xxxx, uniform soft yellow, rare and beautiful, ht. 7 in. 9 0...0 10

GROUP III.—PARVI-CORONATI.

Dolly-Cup or Poet's Narcissi.

DISTINGUISHING CHARACTER.—Depth of cup less than one-quarter the length of the perianth segments (petals).

> In this series, Poëticus (the true Poet's Daffodil) is the flower popularly called the Narcissus; Burbidgei is a hybrid between Incomparabilis and Poëtieus, and is the connecting link between Groups II. and III. Biflorus is Parkinson's Primrose-Peerless, a hybrid of Tazetta and Poëticus Gracilis and Tenuior are the Helena of Haworth; Jonquil the Jonquilla of Linnæus; Polyanthus Narcissus the Hermione of Haworth and Tazetta of Sibthorp.

Hybrid Poet's Narcissi, or Dolly-Cup Daffodils.

These with their light and graceful habit and beautiful blossoms are much valued as pot plants (3 to 6 in a pot), and for vases, bouquets, and buttonholes; in beds and borders they are specially attractive, while naturalised in grass few plants are so beautiful.

The Burbidgei Narcissi differ from N. Poëticus in the cup of the flower being generally a trifle longer and not so flat; the early forms commence flowering before Poëticus ornatus, and continue flowering in succession, one variety after another, from March to the middle of May. per doz. each.

§†BURBIDGEI (3), xx, perianth clear white, cup primrose suffused and margined with s. d. s. d cinnabar-red, much prized for cutting, early, ht. 13 in.per 1000, 21/-; per 100, 2/3 o 4... — Beacon. See New Seedling Daffodils, page 11each 15s.

MANURES, SOILS, FIBRE, VASES & BOWLS FOR DAFFODILS.
BASIC SLAG, best quality, per cwt. 10/6; per 7 lbs. 1/- (bags free).
BONE MEAL (Genuine Crushed Bones), best quality, per cwt. 14/-; per 7 lbs. 1/3 (bags free).
SULPHATE OF POTASH, finest quality, per cwt. 21/-; per 7 lbs. 1/9 (bags free).
BARR'S PHYTOBROMA, for Daffodils, Hyacinths, Tulips, etc. We can confidently recommend this as a safe general manure; it should be mixed with the soil below the bulbs at planting time at the rate of 4 cwt. to the acre, or 1½ oz. to the square yard, and in spring, when the
bulbs are showing above ground, a top-dressing may be given—using the same quantities. For Pots, mix Phytobroma with the soil, to be used at the rate of 1 lb. to the bushel, and in spring,
when growth is showing, top dress once a fortnight, using a small teaspoonful and well mixing with surface soil. 2-lb. tin, 1/-; 7 lbs. 2/6; 14 lbs. 4/6: 28 lbs. 7/6; 56 lbs. 12/6; 1 cwt. 20/- (bags free).
BARR'S SPECIAL MIXED POTTING SOIL, 2/6 per bushel (bags free).
BARR'S Specially Prepared FERTILISED FIBRE AND CHARCOAL MIXTURE, for growing bulbs in vases, bowls, jardnets, etc. (see page 5). 3/6 per bushel: 1/- per peck (bags free).

FANCY DECORATED JAPANESE BOWLS (without drainage hole):—5 in. diameter, -/10; 6 in. dia. 1/3; 7 in. dia. 1/9; 8\frac{1}{4} in. dia. 3/-; 9\frac{1}{2} in. dia. 4/-; 10\frac{3}{4} in. dia. 6/-; 12 in. dia. 8/6 each.

For Wooden Labels and other Garden Requisites, see BARR'S SEED GUIDE. Free on application.

for growing bulbs in vases, bowls, jardinets, etc. (see page 5). 3/6 per bushel; 1/- per peck (hags free).

BARR'S SPECIAL Doulton Ware BULB VASES (without drainage hole), suitable for growing Daffodils, etc., in.:—2\frac{1}{2} in. diameter, -/9; 4 in. dia. 1/3; 5\frac{1}{2} in. dia. 2/-; 7 in. dia. 3/- each.

SMALL PEBBLES and Charcoal, 6d. per quart; 3/6 per peck.

Barr's Special List of 24 Grand Daffodils

Strongly recommended for filling Flower Beds and for Pot Culture, also to grow for Cut Bloom, or to naturalise in Grass, Woodlands, etc., etc.

Of the following Twenty-four Handsome Daffodils we have specially cultivated good stocks, knowing how highly they would be appreciated by amateurs when obtainable at a moderate price. All are strong growers and free bloomers, bearing showy and beautiful flowers with long stems, and will be found of great value to cut for Vases and Church Decoration, etc.

ALMIRA, a beautiful large-flowered Poeticus with broad round white perianth of fine substance, cup margined dcep red, ht. 15 in.

Extra Strong Bulbsper 100, 27/6; per doz. 3/9; each -/4

ARIADNE, a flower of refined beauty and one of the most beautiful of the Silver Chalice-cupped, perianth white, cup ivory-white, very large, saucer-shaped, wide and spreading, prettily frilled at margin, a striking flower, lasting long in bloom, ht. 15 in. Award of Merit Birmingham, 1902; Truro, April 8th, 1904; Plymouth, April 12th, 1904; R.H.S., March 28th, 1905.

Extra Strong Bulbsper doz. 84/-; each 7/6

BRIDESMAID, a charming variety of the *Leedsii Group*, perianth pure white, fairly broad and campanulate, cup white, slightly margined pale primrose, large and of globular form, prettily crinkled at brim, beautiful, ht. 20 in.

Extra Strong Bulbsper doz. 12/6; each 1/3

BARRII CONSPICUUS, this has truly been referred to as Queen of the Chalice Cups, a flower of great beauty and refinement, having broad soft yellow petals and short cup, with deep margin of orange-scarlet; its lovely flowers are much prized for vases, bouquets, and buttonholes; a robust strong grower and free bloomer, ht. 20 in. First-Class Certificate R.H.S.

BEAUTY, one of the finest coloured Chalice-cupped Daffodils, bearing bold handsome flowers on long stems; large yellow perianth, with delicate primrose bar running down the centre of each petal; cup large and handsome, yellow stained orange-red; a valuable flower for cutting and exhibition, and remarkably effective in flower beds and naturalised, ht. 23 in. Award of Merit R.H.S.; Certificate of Merit R.B.S.

Extra Strong Bulbsper 1000, 110/-; per 100, 12/6; per doz. 1/9

GASSANDRA, without doubt the finest of all the Poeticus Narcissi; a noble and perfectly shaped flower of fine substance, with broad wide-spreading clear white perianth, cup deeply rimmed dark red; habit tall and vigorous, ht. r7 in. Award of Merit R.H.S., 1899.

Extra Strong Bulbsper. doz. 48/-; each 4/6

DUOHESS OF WESTMINSTER, may be called the Queen of the Leedsii section for its finely formed handsome flowers and delicate colouring; it has a large spreading pure white tapering perianth and long soft canary cup, tinged orange on first expanding, and passing off almost white. We can strongly recommend this Daffodil for either flower-beds and borders, pots or cutting; the blooms are borne on stout stalks, and the foliage is of a beautiful glaucous blue-green. A charming Daffodil to naturalise in grass, the handsome flowers standing out like large white stars. First-Class Certificate R.H.S.

Extra Strong Bulbs......per 100, 25/-; per doz. 3/6

ELIZA TURCK, a very charming dwarf Trumpet Daffodil of very refined beauty, flower a uniform delicate soft yellow, a gem for the front of borders and rock gardens, ht. 11 in.

Extra Strong Bulbs......per 100, 40/-; per doz. 5/6

EMPEROR, a grand Trumpet Daffodil, well deserving its name *Emperor* on account of its very large rich full yellow flowers and stately bearing; very free blooming; greatly prized for cutting, ht. 21 in.

Strong Flowering Bulbsper 1000, 70/-; per 100, 7/6; per doz. 1/3
Extra Large Bulbs, 90/-; , 9/6; ,, 1/4

EMPRESS, another grand Trumpet Daffodil, and a charming companion plant to *Emperor*; the flowers are large, chaste and beautiful, and of great substance, with rich golden-yellow trumpet and bold snowy white perianth, ht. 20 in.

GLORIA MUNDI, one of the most handsome and brilliantly coloured of the *Incomparabilis* section; it is a glorious flower with fine bold clear rich yellow perianth, large cup much expanded and very heavily stained orange-scarlet, handsome and striking, strong grower, extra fine, ht. 18 in. This is without doubt the finest yellow *Incomparabilis* with stained cup yet raised, and is a noble flower either for the flower garden or for cutting. Awarded First-Class Certificates R.H.S. and Midland Daffodil Society.

Extra Strong Selected Bulbeper 100, £12; per doz. 30/-; each 2/9

J. B. M. CAMM, a Trumpet Daffodil of exquisite beauty, perianth snow-white and of great substance; trumpet rich cream and of fine form; a strong grower, and valuable either for beds, borders, or pot culture, ht. 12 in. Firet-Claee Certificate R.H.S.

Extra Strong Selected Bulbs......per 100, 40/-; per doz. 5/6; each -/6

- MABEL COWAN, perianth white, cup broadly margined orange-scarlet, a beautiful flower of good substance, late-flowering; a profuse bloomer and valuable for succession and cutting, ht. 20 in. Floral Certificate at the Daffodil Conference.

Extra Strong Bulbsper 100, 21/-; per doz. 3/-

MADAME DE GRAAFF, this lovely White Trumpet Daffodil well deserves its title, "The Queen of White Trumpets," for the chaste beauty and graceful outline of its flowers. It takes a prominent place among the largest of the White Trumpet varieties. In addition to being a robust grower and free bloomer, it forces well and makes an elegant pot plant for greenhouse decoration, while in flower beds and borders, or naturalised in grass, few Daffodils are so beautiful. The cut flowers are highly prized by exhibitors, and to cut for vases, ht. 16 in. Firet-Class Certificate R.H.S.

M. J. BERKELEY, a fine self-yellow Trumpet Daffodil of remarkably handsome form, resembling Maximus, but larger, trumpet very much expanded and reflexed at brim, ht. 17 in.

Extra Strong Bulbeper 1000, 110/-; per 100, 12/6; per doz. 1/9

MRS. LANGTRY, a dainty silvery Chalice-cupped Daffodil of the Leedsii group, broad white perianth with large white cup more or less margined primrose, as characteristic and novel as it is beautiful; it is one of the freest bloomers, and a general favourite for bouquets, buttonholes, and vases. Firet-Clase Certificate R.H.S.

QUEEN OF SPAIN, found by Mr. Peter Barr in Spain. One of the most beautiful, distinct, and graceful Daffodils in cultivation, and unsurpassed either for bedding, pot or vase culture, or for naturalising in woodlands, etc. The flowers vary slightly in size, but all are of a uniform soft, delicate, clear yellow, with a gracefully reflexing perianth, trumpet of distinct and elegant form, ht. 12 in. Naturalised in grass under trees, this Daffodil forms a delightful feature in the garden. Awarded Floral Certificate at the Daffodil Conference, 1896.

> let Size Bulbsper 1000, 165/-; per 100, 17/6; per doz. 2/6 Second Size Bulbs, for large) 110/-; ,, 12/6; 1/9 plantinge, to naturalise

RAY SMITH, a very handsome yellow trumpet Daffodil, flowers a uniform rich yellow, distinct and elegant in form and of good substance, perianth gracefully twisted and tapering to a point; a free bloomer and strong grower with broad deep glaucous blue foliage, ht. 16 in.

per 100, 75/-; per doz. 10/6; each 1/-

SIR WATKIN, the Giant of the Chalice Cups, a bold, handsome rich yellow flower, with large open cup sometimes stained orange; a strong sturdy grower and free bloomer; it forces well, and for cutting its showy flowers are greatly prized, while for bedding, massing, and naturalising in grass, etc., it has few equals, ht. 21 in.

> Strong Flowering Bulbe......per 1000, 60/-; per 100, 6/6; per doz. 1/-Extra Large Bulbs , 80/-; , 9/-; , 1/4

STELLA SUPERBA, a very handsome Chalice-cupped Daffodil, with immense flowers of good substance, borne on long stout stems; perianth clear white, and spreading, large showy yellow expanded cup; it is a free bloomer and strong grower, and for cutting highly prized; naturalised in grass or used for bedding it is remarkably effective, the large handsome flowers holding their heads well up above the foliage, ht. 20 in.

Extra Strong Bulbsper 1000, 110/-; per 100, 12/6; per doz. 1/9

VESUVIUS, one of the showiest of the Chalice-cupped Daffodils, sulphury white perianth, cup stained glowing orange-red; good grower and profuse bloomer, ht. 15 in.

Extra Strong Bulbs......per 100, 55/-; per doz. 7/6; each -/8

VICTORIA, a grand Bicolor Trumpet Daffodil, flowers large, bold, and erect, with creamy white perianth of remarkable breadth and good quality, trumpet clear rich yellow, large, broad and of great substance, beautifully flanged and frilled at mouth: it forces easily and may be had in flower earlier than any other Bicolor, ht. 18 in. Award of Merit R.H.S.; Certificate of Merit Royal Botanic

Specially Selected Bulbs for Foreing...... " 18/6;

Three Dainty Miniature Daffodils.

Little Gems for the Rock Garden, or to Grow in Pans, Pots, or in Miniature Yases.

CYCLAMINEUS, the Yellow Cyclamen-flowered

Daffodil, the earliest of all Daffodils, and a charmingly elegant little flower of remarkably distinct form, perianth gracefully reflexed and trumpet elegantly serrated, clear rich self-yellow, most valuable for potculture, edgings, rockwork, and to naturalise in grass and shady nooks, or at the water's edge, ht. 6 in., First-Class Certificate R.H.S.

(This beautiful little Daffodil was re-introduced into cultivation in 1887 by A. W. Tait, Esq., of Oporto, after a lapse of 200 to 300 years.)

per 100, 17/6; per doz. 2/6; each 3d.

... ,, 4/6; ,, A Few Extra Large Bulbs

5d.

MINIMUS, true, the smallest and dwarfest Trumpet Daffodil, rich full yellow flowers, of perfect shape; size not exceeding 1 inch in diameter, and height about 3 inches, flowering outdoors in February; a dainty little gem for edgings, nooks on rockwork, or to naturalise in grass and for pot-culture. In 1887, during a tour in Spain, our Mr. Peter Barr found this charming miniature Daffodil growing freely amongst gorse, with a south aspect.

per 1000, 100/-; per 100, 10/6; per doz. 1/6

TRIANDRUS ALBUS, the Angel's Tears Daffodil, an exquisitely beautiful little flower, with drooping heads of creamy white flowers, having a dainty cup-shaped crown and perianth, elegantly reflexing like a cyclamen. Mr. Peter Barr found this little species on the mountains of Portugal and Spain, growing in very hard, firm, fine, gritty soil, sometimes in the narrowest fissures of granite and slatestone rock. It makes a dainty little pot plant (several bulbs in a pot), and is a charming subject for the Rock Garden, ht. 7 in.

per 100, 8/6; per doz. 1/3

BARR & SONS,

11, 12 & 13 King Street, Covent Garden, London.

NURSERIES-Ditton Hill, near Surbiton, Surrey.

THREE USEFUL TOOLS FOR BULB PLANTING.

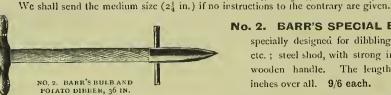

No. 1. BARR'S SPECIAL BULB PLANTER (Regd. 368338), specially designed for planting Daffodils, etc., in grass. At every operation it lifts a clean circular little sod of grass which is released from the cup when the second Lole is made, and lies ready at hand to fill in the holes when the bulbs have

been put in. A time must be chosen for planting when the ground has become softened after early autumn rains and not when in a hard and baked condition, as it is then impossible to use this or indeed any other tool with success. By the use of BARR'S SPECIAL BULB PLANTER

a large quantity of bulbs may be planted in a very short time, and without the least disturbance of the length of the tool is 38 inches over all. The cup is manufactured from high-class sward. hardened steel and consequently always carries a keen cutting edge.

Supplied in 3 sizes of cup :- To cut out a circular hole 2 inches diameter. $2\frac{1}{1}$,, 10/6 each. ,,

No. 2. BARR'S SPECIAL BULB DIBBER,

specially designed for dibbling bulbs into borders, ctc.; steel shod, with strong iron tread and cross wooden handle. The length of the tool is 36 inches over all. 9/6 each.

No. 3. BARR'S SPECIAL BULB TROWEL, made of

best steel, specially designed for lifting and planting bulbs, etc. It will be found of great value for general garden purposes, and far in advance of the old-fashioned trowel. 2/9 each.

- NO. 3. BARR'S SPECIAL BULB TROWEL.

DAFFODIL COLOURED AND UNCOLOURED PLATES.

These Daffodil Plates can be had, post free, at the following charges:—
